Luh Wayan Yasmianti, Putu Abda Ursula*

The International Journal of Advanced Technology and Social Sciences (IJATSS) is dedicated to advancing interdisciplinary research at the intersection of cutting-edge technology and the dynamic field of social sciences. This journal aims to explore the transformative role of emerging technologies in shaping societal structures, human behavior, and cultural phenomena across diverse global contexts.

In today's rapidly evolving world, technological advancements are not only changing the way we live and work but also significantly influencing our social systems, communication patterns, and economic practices. At the same time, social sciences offer critical insights into understanding the human dimension of technological innovation, addressing challenges such as digital inequality, social justice, ethical concerns, and the impact of automation on employment and social well-being.

IJATSS serves as a platform for scholars, practitioners, and thought leaders to share innovative research, provide new perspectives, and foster discussions on topics such as:

- The impact of artificial intelligence, machine learning, and automation on society
- Technology-driven social transformations and digital cultures
- Ethical issues in the development and application of new technologies
- The role of technology in education, health, and urban development
- Social and economic implications of emerging technologies

The journal publishes high-quality original research articles, review papers, case studies, and conceptual contributions that bridge the gap between technological advancements and social sciences. Through this interdisciplinary focus, IJATSS aims to contribute to the development of knowledge that can lead to more sustainable, inclusive, and socially responsible technological progress.

We invite researchers from diverse fields to engage with our journal and submit their work, encouraging a global dialogue that considers both the opportunities and challenges posed by advanced technologies in today's interconnected world.

We believe that the convergence of technology and social sciences is essential to addressing the complex issues of our time and shaping a future that is both innovative and equitable.

Happy Reading

Marisa Yunita, S.Pd., M.M
